Summary

Software Engineer specializing in the MERN stack with experience building scalable, high-performance web applications. Strong expertise in **Tailwind, Bootstrap, Mui, React, Node.js, Express, and MongoDB**, with a focus on clean architecture and user-centric solutions.

Experience

MERN Stack Developer – Infini8Ai, Rawalpindi (July 2025 – Present)

Implement React.js (Hooks, Functional Components) • Redux • Context API • API Creation and Integration (Axios, Fetch) • Stripe Integration • MUI • Tailwind • Bootstrap • Memoization (useMemo, useCallback, React.memo) • Code Splitting • Lazy Loading • Caching • Virtualization (react-window) • WebSockets • ProseMirror Editor • React-Toastify • SEO (React Helmet) • Google Analytics • Node.js • Express.js • JWT Authentication • Redis Caching • MongoDB (Schema Design, Aggregations, Indexing, Query Optimization) • Mongoose ODM • Role-based Access Control • API Security • RESTful API Development • AI APIs (OpenAI ChatGPT, Gemini) • Rate Limiting (Fingerprint-based) • Error Monitoring (Email Notifications) • Docker • Vercel • Firebase • Git/GitHub • Environment Variables (.env Management)

Mern Stack Developer – InventioSoft, Huzaifa Plaza (July 2024 – July 2025)

Contributed to applications including **RoyCat.lol**, **Tamatomos**, **Rooftop Cricket Management (FYP)**, and **Bs.Game**, building responsive and scalable MERN stack solutions with strong focus on frontend optimization, backend integration, and reusable architecture • React.js • Node.js • Express.js • MongoDB • Mongoose ODM • REST APIs • API Integration (Axios, Fetch) • State Management (Redux, Context API) • Reusable Components • Performance Optimization (Memoization, Code Splitting, Lazy Loading, Caching) • Authentication & Authorization • Third-party Integrations (Twitter API, Stripe, MetaMask Wallet) • Responsive UI Design (Tailwind CSS, Bootstrap, Material UI) • MongoDB Query Handling & CRUD Operations • Error Handling & Debugging • Git/GitHub Version Control

Key Projects

ResearchPal.co (MERN Stack) – Developed an AI-powered research and document collaboration platform that enables real-time document sharing using WebSockets with read and write access. Implemented AI text generation, Chatbots, translation, and interactive PDF chat and citation management, library. Integrated Stripe for subscription billing, similarity graph functionality, SEO optimization using react helmet and google analytics through GA4 and managed version control. Sending error mail in case of failure.

ManageKaro.org (MERN Stack – POS System) – (Optimized 25% performance) - Optimized a comprehensive Business Management & POS Platform featuring invoicing, billing, sales tracking, inventory management, and financial analytics dashboards, driving a 25% improvement in operational efficiency and business performance.

DataLumio.co (MERN Stack) – Developed a data analysis and cleaning platform with interactive data visualization and table conversion tools, enabling users to connect and analyze data from multiple sources including MySQL, PostgreSQL, Excel sheets, Google Drive, Meta campaign data, and Supabase. Implemented secure database integration pipelines for real-time data fetching, processing, and transformation to generate meaningful insights. Worked on SEO optimization, robust error handling system with automated email notifications, and version control management to ensure application stability and maintainability.

A47.news (React.js) – Developed an AI-powered content and video generation platform using React.js with Redux for state management and Material UI for responsive design. Built scalable and reusable components, optimized performance, and managed complex application flows. The platform included AI-based news content generation with automated video creation, scripts, image and talking avatar features, along with integration of BBC and CNN for real-time news content delivery.

RoyCat.lol (Reactjs) – Built a crypto staking platform offering real-time reward and fee calculations. Designed a wallet-friendly user interface with secure and efficient transaction handling.

Tamatomos (MERN Stack) – Developed a referral and reward system with inventory management, leaderboard, and admin dashboard functionality. Integrated MetaMask and Twitter authentication for enhanced user engagement and tracking.

Rooftop Cricket Management (MERN Stack) – Developed a booking and payment platform (Stripe) with role-based access for users, admins, and super admins. Implemented revenue tracking, booking management, and real-time notifications for seamless operations.

Technical Skills

Frontend: React.js, Redux, Tailwind CSS, Bootstrap, MUI

Backend: Node.js, Express.js, REST API, WebSocket

Database: MongoDB

Deployment: Vercel, Firebase

Tools: GitHub, VS Code, Postman, Thunder Client

Other: SEO, Google Analytics (GA4)

Education

BS Software Engineering (BSSE) – National University of Modern Languages (NUML), Islamabad, 2021 – 2025

FSc Pre-Engineering – BISE Sargodha

Matric Science – BISE Sargodha

Certifications

- Introduction to Web Development – University of California, Davis (Coursera)
-
